

Activity Rules

ACTIVITY BY:
COLLEGE PARK AVIATION MUSEUM AND THE WINGS FOR VAL FOUNDATION

Types of Tiles

Airports

Airports add to your final score and allow the plane to refuel

Points: Airports are the main way to score points and are worth twice as much as tailwinds towards your final flight efficiency.

Refuel: The airplane's fuel is reset to three, allowing the bot to travel three tiles after leaving the airport.

Code: To refuel and score a point, the Ozobot must do the "Spin", "Tornado", or a flashing light command on an airport tile.

Tailwinds

Tailwinds speed up the plane and add to our final score

Points: Passing through more tailwinds than headwinds will add points to your flight efficiency.

Code (Optional): When passing through a tailwind, have the Ozobot speed up! If the Ozobot is already going fast, you do not have to speed up again.

Headwinds

Headwinds slow down the plane and subtract from our final score

Points: Passing through more tailwinds than headwinds will add points to your flight efficiency.

Code (Optional): When passing through a headwind, have the Ozobot slow down! If the Ozobot is already going slow, you do not have to slow down again.

Impassable

These tiles are impassable

Maybe there is a mountain in the way, or a restricted air space, but our airplane does not have the ability to cross through this location!
